System Profile

This year, a specially-tailored research effort offers an expanded and updated system profile for CableFile/84. Each of the nation's systems are profiled and listed alphabetically within each state by principal community served. Care was taken to make each profile as complete as possible and the result has been an average response rate of over 90% for crucial system data. Nearly 700 systems have been added for a total of over 5800 operational cable systems.

In answer to increasing requests from our subscribers, an attempt has been made to include in each system profile the system's television market assignment, whether or not the system has a production studio and the name of the program guide. The two-way services category now classifies a system as either two-way capable or, if services are actually being offered, as two-way active. If neither applies, the system is defined as one-way active.

The typical cable system listing provides pertinent information such as the name of the local manager, ownership, program offerings, rates, homes passed, channel capacity and number of subscribers. In cases where all the information was not attainable, only that which was available was listed.

HBO, Cinemax and CBN logos have been incorporated into the system profile and appear with the listings of the systems that offer these services to their respective subscribers (these are paid advertisements).

The following is a legend explaining all the possible entries for any given cable television system.
